For SEQ ID # 20 and 21, numeric identifier <213> can only be one of three choices, "Scientific name, i.e. Genus/species, Unknown or Artificial Sequence." For all sequences using "Unknown" or "Artificial sequence", for numeric identifier <213>, a mandatory feature is required to explain the source of the genetic material. The feature consists of numeric identifier <220>, which remains blank and, numeric identifier <223>, which states the source of the genetic material. Suggest using "Artificial sequence" for numeric identifier <213> and "Synthetic" for numeric identifier <223> in the mandatory feature. Please make all necessary changes.

<223> S and N are A, T, G or C

<400> 22

```

For SEQ ID # 22, the "s" nucleotide designator can only represent "c or g" as defined in the sequence rules, Table 1." The "s" nucleotide designator cannot be redefined in the feature as "A, T, G, or C." Please define the "s" nucleotide designator as "c or g" only, in the feature above, or remove the "s" nucleotide designator entirely from the feature. The "s" nucleotide designator can be removed from the feature because it is already defined in "Table 1" of the sequence rules and does not need to be part of the mandatory feature shown for the "n" nucleotide designator.

```

This error has occurred more than 20 times, will not be displayed

The warnings shown, in number 3 above, are ok and require no response.

Note:

To correct the sequence listing errors noted in this report - The recommended method for correction of errors is to access the sequence listing working file using the software program in which the listing was originally prepared, e.g., the project file in PatentIn, make any necessary corrections within that program, then generate a new sequence listing file. Use of a word processing program to correct errors directly in the original sequence listing file is strongly discouraged, since such programs often introduce unintended changes to the sequence listing, rendering the listing unacceptable. When the working file or original program is not available for correction, then use of a common or plain text-only editor, such as NotePad, to edit the original sequence listing file may suffice.
